

89XHB

HIGH PRESSURE TIRE INFLATOR

- Allows remote start away from blast zone
- Large backlit LCD display
- Accurate to within .3psi
- 1/2" Inlet/Outlet maximizes air flow
- Self calibrating/maintenance free
- Inflates or deflates automatically
- Promotes employee safety
- Equipped with higher rated pressure sensor

Fleet Operations, Commercial Tire Mounters, and Heavy-Duty Tire Centers

The 89XHB Inflator is specifically designed to inflate on 19.5" rims and larger or multiple truck tires. It is constructed from a heavy duty die cast enclosure and features a simple 4-button layout with easy use instructions. What differentiates this unit from our others is that it utilizes a 1/2" inlet hose for the compressed air flowing into the unit, as well as, a 1/2" large volume outlet. The inflator can be adjusted from 5-188psi in 1psi increments. This system is also extremely safe to operate as the technician can stand away from the tire(s) while inflation takes place.

THE WORLD'S LEADING SUPPLIER OF SAFETY,
ACCURACY & EFFICIENCY IN TIRE INFLATION
